

Contents

1. Pruning Principles

- Introduction
- Pruning Factors
 - Citrus Tree Growth
- Plant Metabolism and the Vascular System
- Tree Development
- Structural Development
 - Types, Cultivars and Rootstocks
 - Vegetative Growth
 - Fruit Bearing
 - Fruit Sets
 - Alternate Bearing
 - Climatic Conditions
 - Temperature
 - Frost
 - Wind
 - Tree Spacing
- Production Practices
 - Application of Agrochemicals
 - Citrus Disease Management
 - Picking
- Pruning Outcomes
 - Improving Light Interception
 - Maintaining Tree Shape and Size
 - Row and Orchard Shape
 - Removing Unwanted Growth
 - Shaping Young Trees
 - Preventing Radical Pruning
- Timing of Pruning
- Pruning Methods
 - Manual Pruning
 - Mechanical Pruning
- Post-Pruning Care
- Conclusion

2. Pruning Equipment

- Introduction
- Pruning Equipment and Uses
 - Pruning Shears
 - Loppers
 - Pruning Saw
 - Other Saws
 - Other Equipment
- Equipment Maintenance
 - Maintaining Pruning Shears and Loppers
 - Checking Pruning Shears
 - Cleaning Pruning Shears
 - Sterilising Pruning Shears
 - Greasing Pruning Shears

Adjusting Blades
Sharpening Blades
Replacing Blades
Maintaining Pruning Saws
Managing Pruning Equipment
Storing Pruning Equipment
Conclusion

3. Pruning Practices

Introduction
Health and Safety
Pruning Actions – Mature Trees
Cutting Windows
Removing Water Shoots
Removing Deadwood
Removing Crossed Branches
Skirting
Removing Shoulders
Pruning Procedures – Mature Trees
Maintenance Pruning
Corrective Pruning
Pruning Procedures – Young Trees
Equipment Use and Sterilisation
